Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance:

The prior art of the record fails to teach or suggest alone or in combination: A method for generating communication signals comprising the steps of: selecting a code length, wherein each chip of said plurality of chips is one of a nonzero value and a zero value, wherein said non value is one of a positive and a negative value; arraying said plurality of chips such that said at least one positive value and said at least one negative value are placed in accordance with a pattern, said pattern being from a family of binary patterns wherein each pattern within said family of binary patterns is substantially orthogonal to substantially all time-shifted versions of each other pattern within said family of binary patterns; as recited in claim 1 and in combination with other steps of the claim.

Claim 1 is allowed.

The prior art of the record fails to teach or suggest alone or in combination: A method for generating a set of communication signal sequences comprising the steps of: defining said set such that all of said communications signal sequences in said set have a code length, said code length comprising a plurality of chips, each of said chips having a value, said value being one of a positive value, a negative value, and a zero value; arraying said chips such that said at least one positive value and said at least one negative value are placed in accordance with a pattern, said pattern being from a family of binary patterns wherein each pattern within said family of binary patterns is

substantially orthogonal to substantially all time-shifted versions of each other pattern within said family of binary patterns; as recited in claim 18 and in combination with other steps of the claim.

Claims 18, 25-27 are allowed.

The prior art of the record fails to teach or suggest alone or in combination: A radio communication system comprising: a radio transmitter; and a radio receiver; said radio transmitter and said radio receiver employing a communications signal having a code length, said code length comprising a plurality of chips, wherein each chip of said plurality of chips is one of a non-zero value and a zero value, and wherein said non-zero value is one of a positive and a negative value, arraying at least one said positive value and at least one said negative value in accordance with a pattern selected from a family of patterns wherein said family of patterns is such that any pattern within said family of pattern is substantially orthogonal to substantially all time-shifted versions of any other pattern within said family of patterns; and wherein the radio transmitter employs the communications signals to generate and transmit a transmission signal, as recited in claim 28 and in combination with other elements of the claim.

Claim 28 is allowed.

The prior art of the record fails to teach or suggest alone or in combination: A method of generating communication signals comprising the steps of: selecting a code length, said code length comprising a plurality of chips, wherein each chip of said plurality of chips is

Art Unit: 2611

one of a nonzero and a zero value, wherein said non-zero value is one of a positive and a negative value; arraying at least one said positive value and at least one said negative value in accordance with a pattern, wherein said pattern is selected from a family of patterns, wherein any pattern within said family of patterns is substantially orthogonal to substantially all time- shifted versions of any other pattern within said family of patterns; as recited in claim 44 and in combination with other steps of the claim.

Claims 44-45 are allowed.

The prior art of the record fails to teach or suggest alone or in combination: A method of generating communication signals comprising the steps of: selecting a code length, said code length comprising a plurality of chips, wherein each chip of said plurality of chips is one of a positive value and a negative value; arraying said plurality of chips wherein: at least one said positive value and at least one said negative value are in accordance with a pattern, wherein said pattern is selected from a family of patterns and wherein said family of patterns is such that any pattern within said family of patterns is substantially orthogonal to substantially all time-shifted versions of any other pattern within said family of patterns, as recited in claim 46 and in combination with other steps of the claim.

Claims 46-47 are allowed.

The prior art of the record fails to teach or suggest alone or in combination: A radio communication system comprising: a radio transmitter; and a radio receiver; said radio transmitter and said radio receiver employing a communications signal having a code length, said code length comprising a plurality of chips; a code length wherein each chip of said plurality of chips is one of a non-zero value and a zero value, wherein said non-zero value is one of a positive value and a negative value and at least one said positive value and at least one said negative value is arrayed in accordance with a pattern selected from a family of patterns wherein any pattern within said family of patterns is substantially orthogonal to substantially all time-shifted versions of any other pattern within said family of patterns, and wherein the radio transmitter employs the communication signals to generate and transmit a transmission signal as recited in claim 48 and in combination with other elements of the claim.

Claims 48, 51 are allowed.

The prior art of the record fails to teach or suggest alone or in combination:

A radio communication system comprising: a radio transmitter; and a radio receiver said radio transmitter and said radio receiver employing a communications signal having a code length, said code length comprising a plurality of chips, wherein each chip of said plurality of chips is one of a non-zero value and a zero value, and wherein said non-zero value is one of a positive and a negative value, arraying at least one said positive value and at least one said negative value in accordance with a pattern selected from a family of patterns wherein said family of patterns is such that any pattern within said family of

pattern is substantially orthogonal to substantially all time-shifted versions of any other pattern within said family of patterns; and wherein the radio transmitter employs the communications signals to generate and transmit a transmission signal, as recited in claim 28 and in combination with other elements of the claim.

Claims 52, 55 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
